Re: **The Village at Institute Road
Definitive Application
Waiver Requests**

Dear Board Members:

On behalf of the Applicant, D&F Afonso Builders, Inc., Guerriere & Halnon, Inc. respectfully request the following *waivers of strict compliance* with the Rules and Regulations Governing the Subdivision of Land for the above referenced project

1. **Section 4.2.1.2 Curbs and Berms –**

Audrina Lane: The proposed grade of the road at its intersection with Institute Rd. is 3%. The 3% grade remains up to Station 1 +04+/- where the roadway transitions from 3% to 5% at Station 3+35.99. The grade remains at 5% till it reaches 4+60.18 where it transitions through a vertical curve to a 3% grade at Station 5+30.18. The grades remains at 3 % to about Station 8+10 +/- at the intersection with Brooke Street. The Applicant requests a waiver of strict compliance with Section 4.2.1.2 to allow the use of low profile “Cape Cod” berm along the entire roadway. Vertical granite curbing would be utilized in accordance with Section 4.2.1.2.a at intersections and at catch basins. The Grafton Conservation Commission has recommended “Cape Cod” berm due to the vernal pool on the property. Vertical granite curbing would severely limit the migration to and from the vernal pool on site.

Brooke Street. This roadway starts at Institute Road where the proposed grade is 2%. The proposed grade remains at 2% up to Station 7+70.30 where the roadway grades transitions through a vertical curve to 7% at Station 9+10.03. The roadway remains at 7% till it reaches Station 11+32.90 where it enters a vertical curve and transition to a roadway grade of 2% at Station 13+07.90. The proposed grade remains at 2% till it reaches Station 16+19.77, just beyond the intersection with Audrina Lane where it enters a vertical curve and transition to a 3% grade at Station. 16+47.77. The grade remains at 3% till the end of the road at Station 19+14.64. The applicant requests a waiver of Section 4.4.2.2 to allow the use of slant granite curbing from the catch basin at Station 16+28.23 to Station 13+07.90. Vertical granite curbing will be utilized at intersections and catch basins per Section 4.2.1.2.a. An additional waiver is requested to allow the use of low profile “Cape Cod” berm from Station 15+77.25 to the end of the cul-de-sac at Station 19+14.64. The roadway grade in this area is 3%. Vertical granite curbing would be utilized at intersections and at catch basins. The Grafton Conservation Commission has recommended “Cape Cod” berm due to the vernal pool on the property. Vertical granite curbing would severely limit the migration to and from the vernal pool on site.

Dylan Way This roadway begins at Brooke Street where the grade is proposed at 3%. The road remains at 3% until it reaches Station 1+13 where it transitions through a vertical to a 5% grade at Station 1+83.00. The grade remains at 5% until it reaches Station 2+44.10 where it transitions to a 2% grade at Station 3+31.10. The roadway remains at 2 % until it ends at the cul-de-sac at Station 5+76.71. The Applicant requests a waiver of strict compliance with Section 4.2.1.2 to allow the use of low profile “Cape Cod” berm from Station 0+0 to Station 3+31.10. Vertical granite curb would be utilized in accordance with Section 4.2.1.2.a at intersections and at catch basins. The Grafton Conservation Commission has recommended “Cape Cod” berm due to the vernal pool on the property. Vertical granite curbing would severely limit the migration to and from the vernal pool on site. This roadway is in relative close proximity to the Vernal Pool.

2. **Section 3.3.3.16.d** Requires that the 1929 USGS vertical datum be utilized. Current vertical datum standards for most GIS programs utilize 1988 USGS datum. The Applicant requests a waiver to use the 1988 datum for these plans.
3. **Section 7.B.1.h** Requires that the plan show existing and proposed contours utilizing a 1 foot contour interval. Due to the amount of elevation relief on the site the Applicant requests a waiver to utilize a 2 foot contour interval. We feel that a one foot contour interval will make the plans more difficult to read.

I trust this information is sufficient for your needs. If you have any questions or comments, please call me at 508-234-6834.

Sincerely
Guerriere & Halnon, Inc.
